

BRITAIN FINDS COMMUNAL FEEDING IS ECONOMICAL

National Kitchens Are Giving Public More and Better Food at Smaller Outlay.

MAY BE PERMANENT FEATURE

Lesson of War Times Shows Great Waste in Effort and Material in System of Individual Cent Cooking. Scientific Methods in New Plan.

BY R. P. P. ROWE.

LONDON, October 24.—"Probably at some future time," writes a British authority, "it will be difficult to believe that each household in the country did its own separate marketing, buying small quantities of food from retail dealers 100 per cent above cost prices that every hundred houses in a district had each its own fire for cooking, and that at least 100 human beings were engaged in serving meals that could have been better prepared by half a dozen trained assistants."

Most of us shrink from the unaccustomed sound of the word "communal" still a considerable prejudice against communal cooking. The truth is that we have acquired the habit of being wasteful and prefer to live wastefully, but it is equally true that we can no longer afford to do so. To be able to save the world now and in the future, we have to acquire a new habit—the habit of systematic economy. The new efficiency for it is nothing else which the nations must learn to live on. Frugality, though necessary, is a small part of it. What is wanted is a larger and wider productivity, a wider as well as more saving use of what is produced, and the elimination of waste by its utilization. On this three-fold problem the British Ministry of Food, in connection with the British Board of Agriculture, is at work to an extent which is not generally recognized. Of its many activities the system of national kitchens which is now being tested is an interesting example.

WOULD ELIMINATE WASTE
If the British nation were obliged to live on half its present amount of food, there is no doubt that the most effective and economic method by which this could be accomplished would be by the compulsory substitution of communal feeding for every other form of diet. In such an extreme case, which, though never likely to arise, cannot be dismissed from the domain of possibility, it is even probable that communal feeding would prove the best solution. The importance, therefore, of establishing national kitchens in large numbers each working at an estimated cost of the present time.

By the vast majority who have not seen this system at work, it may as yet be little appreciated. This is not surprising, for till lately, the communal kitchen has been a name to most people, and few are likely to grasp the significance of an unfamiliar idea. The picture of the mind of many is perhaps of huge government restaurants, of multitudes of attendants, of an atmosphere of officialdom and red tape, the whole yielding the unpleasant impression of people being fed by machinery. That this is remote from reality will be obvious once to anyone who takes the trouble to visit an existing national kitchen. To outline the system and explain the need for it is all that can be attempted here.

Waste of food that goes on normally in this and in every other country is due partly to thoughtlessness, but partly at least among the poorer classes, to less preventable causes. The housewife who does her own marketing and cooking has, especially these days, neither sufficient time and opportunity for the former nor sufficient time and knowledge for the latter. It is essential for efficiency and economy.

(1) That labor in general should be saved.
(2) That there being a shortage of supplies, the nutritive values of the various foodstuffs should be scientifically considered, so as to make the "possible" little do the service of the "impossible" much.
(3) That as a corollary of the foregoing, the cooking should be the best which ordinary science is capable of, the food thereby retaining its nutritive and being made digestible and appetizing.

MUST COOK BY SCIENTIFIC METHOD
OPERATION ON LARGE SCALE
But for the achievement of all and each of these ends it is necessary that operations should be carried out on a large scale. The single-house system increases labor enormously, because it tends to produce more failures and middlemen as well as taking up the whole of the housewife's time. If she is to do her job properly, incidentally she is doing perhaps for six what for communal cooking a person does for one. The time and energy expended as well as being found by anyone who takes the trouble to examine the routine work of a national kitchen.

With regard to point (2), it is obvious that the average housewife has not the knowledge to deal with the nutritive values of food substances. With regard to point (3), it is unfortunately the case that the average housewife is not a trained cook. The British family cooking in poor households is particularly suffers in an extreme degree from lack of scientific knowledge. The natural consequence being an unnecessary waste and a distinct food provided. In communal cooking, on the other hand, the questions raised by these two points are answered in each case an exactly contrary answer. The immense amount of labor is saved by the national system of baking up the system, there is plenty of time for the cooking to be prepared as long beforehand as need be, and the cooks themselves are thoroughly trained and experts.

The proof of the pudding is in the eating, and it may be said that these remarks are plain and obvious. The food produced anywhere can go to a national kitchen, and the answer is simple. With regard to price and loss, the financial saving, the nutritive value, the health and the food produced anywhere can go to a national kitchen, and the answer is simple. With regard to price and loss, the financial saving, the nutritive value, the health and the food produced anywhere can go to a national kitchen, and the answer is simple.

cashier, as many as 2,000 portions can be served daily. These, sold at what would be to the private person the cost price of the raw materials they contain, or less, are dealt out with surprising speed and accuracy by the purchaser. The purchaser provides his or her own receptacle, and if living within a few minutes' walk of the kitchen, he can take the food home piping hot, so that it need not even be reheated.

CONVENIENT TO ALL
In the system of national kitchens the ideal, though kept steadily in view, is still far ahead. The system will not be completely satisfactory until in every urban district the kitchens are so numerous and well-distributed that nobody is more than a few minutes' walk from one of them. Furthermore, it is advisable that where work people are employed at a distance from home a room should be provided to which those who have bought food can go to eat it. Arrangements are in progress for a wide and rapid expansion of the system.

As the space required for a kitchen is surprisingly small for the amount of food which is produced, and any vacant store can quickly be adapted to the purpose, the project is essentially practicable, and if it is developed successfully, the advantage to the nation, both now and in the future, can hardly be exaggerated. It will mean an immense saving in food, coal and labor, and a vast improvement in the dietary of the great majority. The initial expenditure is much less than might be imagined, and, as has been clearly proved, every kitchen pays its way.

BAKING BY WASTE HEAT
AN ICELAND INVENTION

Student in Frigid Region Devises New Method That Produces Wonderful Results.

WASHINGTON, October 23.—It has remained for frigid Iceland to invent a unique method of baking bread from the waste heat of a gas works. The idea, which is now in successful operation, was that of a young student of Reykjavik, and could be followed with profit, it is suggested, in this and other countries as a fuel conservation measure.

Three-pound loaves have been completely baked in three hours in a special bakery in connection with a heat exchanger and a gas works, with heat carried a capacity load of passengers.

Specify Horlick's The Original Others Are Imitations

The new bread factory, according to a consular report just received here, is turning out an excellent product upon a highly profitable basis.

CRUCIFIED CAT BAIT
Soldiers Entering French Town Shocked at What the Germans Left.

LONDON, October 21.—In reoccupying a French town, soldiers of the Fourth British Army were shocked by the sight of a living kitten crucified to a door by the Germans.

Mewing pitiously in its agony and struggling to release itself, the kitten was found with its forepaws nailed to the wood.
One of the British soldiers rushed forward to release the animal. He pulled out the nails that pierced its paws, but in the moment that he did so there was a flash and a roar, and his mutilated and disoriented body was flung across the street.
A hidden German explosive charge had been set off by the withdrawal of the nails.

RAISES TOBACCO PRICES
Shortage of Supply Causes Italian Government to Take Positive Action.

ROME, October 24.—Once more the government has had to raise the price of tobacco, an official announcement of the Ministry of Finance confesses that, in addition to purposes of revenue, the reason for the increase is a desire to reduce consumption in view of the difficulty in obtaining material to make the demand.

Previous increases in price have not had this effect. The two most popular brands, the Toscani and the Macedonia, cigarette, have risen, respectively, during the war, roughly, from 2 cents to 6 cents each and from 6 to 10 cents a box of ten.

PASSENGER SHIP ASHORE
Canadian Pacific Steamer Princess Sophia Ground Near Skagway.

VICTORIA, B. C., October 24.—Wireless messages received today from the north said the Canadian Pacific Railway Company's steamer Princess Sophia, bound south from Skagway, Alaska, went ashore on the Vanderbilt Reef, Lynn Canal, near Skagway, early today. It was believed that the Sophia carried a capacity load of passengers.

TECH AND CAMP HUMPHRIES WILL MEET ON SATURDAY
Game Called Off for That Date With Aero Squadron of Richmond.

(Special to The Times-Dispatch.)
BLACKSBURG, Va., October 24.—Virginia Polytechnic football team will play the service team from Camp Humphries here Saturday. This date was originally held by the Aero Squadron team of Richmond.

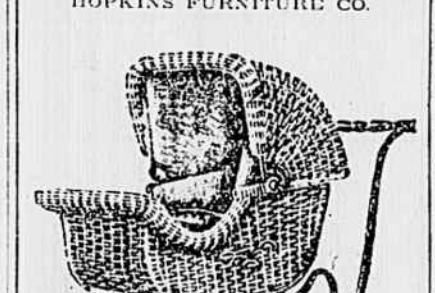

Humphries has one of the best teams in the army. Training Director Dunn and a squad of eight officers will arrive here Friday night. Tech plays Washington and Lee University in Roanoke November 2.

HAD STOCK OF OPIUM
Man Well Known in Eastern Sporting Circles May Be "Dope King"

(By Associated Press.)
PITTSBURGH, October 24.—Patrick Nee, widely known in Pittsburgh and Eastern sporting circles, appeared before Roger Knox, United States Commissioner today, to answer to a charge of having in his possession \$50,000 worth of opium. He was released on \$5,000 bail for further hearing. He declined to make a statement.
Internal revenue agents believe that with the arrest of Nee they have rounded up the head of a national "dope ring." Harry Jacob and John C. Goodman are also under arrest in connection with the investigation.

Wofford College Schedule.
(By Associated Press.)
SPARTANBURG, S. C., October 24.—The football schedule for Wofford College for the 1918 season was announced today by Manager A. N. Head.

Between Poushure and Adams.

Branson, Jr. Five games are provided for. The Thanksgiving date has not been filled, but it is expected that negotiations now in progress will close this date at once. The schedule is as follows: October 26, Clemson at Clemson; November 2, Davidson at Davidson; November 9, Furman at Spartanburg; November 16, Erskine at Wofford; November 23, University of South Carolina at Columbia.

Army Ready for Big Game.
ANNAPOLIS, Md., October 24.—The last hard practice of the Naval Academy eleven in preparation for Saturday's game with the Newport training station was held this afternoon. Two changes were made in the line, both adding weight to it. Benfield, a former guard, was at right tackle in place of King, and Caldwell, a guard of last year's eleven, was at left end. The team showed machine-like smoothness in today's workout.

Couldn't Stand Bayonet Drill.
(By Associated Press.)
CHICAGO, October 24.—Jimmy Barry, former heavyweight champion of the world, is back from Camp Gordon, Ga., where he went for training as an army boxing instructor. Barry said that he was not strong enough to stand the bayonet drill necessary to fit himself as an instructor.

Wofford College Schedule.
(By Associated Press.)
SPARTANBURG, S. C., October 24.—The football schedule for Wofford College for the 1918 season was announced today by Manager A. N. Head.

One safe combination for influenza weather is our double duty "Scotch Mist." Combines the advantages of a smart Fall overcoat along with the property of being rainproof. All wool!

Remember the ill in chill!

Remember, too—clammy cotton chills. The remedy's all-wool underwear.

Everything men wear. Money back if you want it.

Knitted garments for soldiers. Officers' uniforms.
